

NAME

Rich Goldstein – Senior DevOps / Site Reliability Engineer / Unix Linux SysAdmin

SYNOPSIS

yes.sre.rich@gmail.com | (802) 473-1010 | www.awk2me.com

NYC Metro Area and Louisville, CO

DESCRIPTION

Senior DevOps and Site Reliability Engineer with extensive experience designing, automating, and operating cloud-native and hybrid infrastructure. Experienced in AWS, Kubernetes, Infrastructure as Code, CI/CD pipelines, and observability. Proven record supporting developers, scaling platforms, and improving system reliability and performance.

TECHNICAL HIGHLIGHTS

- Designed AWS infrastructure supporting production workloads with Terraform and Infrastructure as Code.
- Built secure CI/CD pipelines integrating automated testing, security scanning, and deployment validation.
- Implemented monitoring, centralized logging, alerting, and metrics collection for production systems.
- Improved deployment reliability through infrastructure automation and repeatable release processes.
- Partnered with software engineering teams to improve platform reliability, scalability, and operational efficiency.

CORE COMPETENCIES

- Cloud Platforms: AWS (EC2, EKS, ECS, Lambda, MSK, S3, VPC) and hybrid (AWS Outposts)
- Container and Orchestration: Kubernetes, Helm, EKS, OpenShift, Docker
- Infrastructure as Code (IaC): Terraform, Terragrunt, CloudFormation, AWS CDK
- CI/CD and Automation: Jenkins, GitHub, Ansible, SaltStack, CircleCI, Bosch
- Observability and Monitoring: New Relic, Datadog, Prometheus, Grafana
- Programming and Scripting: Python, Go, Bash, Ruby, Rust

EXPERIENCE

- Designed Terraform modules that standardized deployment of production AWS infrastructure across multiple environments, reducing provisioning time by 80%.
- Implemented centralized logging and monitoring using CloudWatch, Prometheus and Grafana, improving incident detection and reducing MTTR.
- Built CI/CD pipelines integrating automated testing, security scanning and infrastructure validation.
- Developed Python automation eliminating repetitive operational tasks and improving deployment consistency.
- Collaborated with software engineering teams to improve platform scalability and production reliability.

Senior DevOps Engineer – NGNC Consulting

Remote (NYC & Denver) – July 2023 — Present

- Automated security and compliance workflows across AWS environments
- Performed GitHub security audits and remediation

- Supported Python developers using Django and Flask
- Technologies: AWS, SaltStack, New Relic, Sentry, MySQL, Python, Ruby on Rails

Senior DevOps Engineer – Arturo, Inc.

Remote (NYC & Denver) – November 2022 — July 2023

- Migrated legacy Kubernetes and EKS clusters to modern EKS platforms
- Scaled worker nodes from single digits to over 1300 during processing workloads
- Standardized CI/CD pipelines using Jenkins shared libraries
- Supported AI/ML teams running Airflow on AWS EKS
- Automated infrastructure using Terraform, Terragrunt, Vault, and Consul
- Implemented observability using Prometheus, Grafana, New Relic, and Instana

Senior DevOps / Cloud Engineer – Tipico

Remote (NYC & Denver) – November 2020 — November 2022 Deployed microservices-based sportsbook platforms on AWS and AWS Outposts

- Deployed Outposts in multiple states. Within each state:
 - setup remote datacenter presence
 - order and manage AWS Outpost equipment
 - work with Continent 8 or other network provider to insure trunk networks installed at datacenter
 - setup DXs from colo back to AWS and insure correct connectivity
 - inventory AWS Output equipment and provision required local resources
 - using terraform, deploy infrastructure on Outposts including EKS, S3, OpenSearch, ElastiCache, Consul, Kafka
 - connect and insure new state infrastructure communicates with and shares cloud-based data
 - deploy applications within the new state environment using terraform, helm, jenkins pipelines, and (basically) AWS Controllers for Kubernetes
 - Managed Kubernetes (EKS), Consul service mesh, Kafka (MSK), OpenSearch, ElastiCache
 - Built CI/CD pipelines using Jenkins, Docker, and Fargate
 - Implemented monitoring and alerting across cloud environments

DevOps / Cloud Engineer – NGNC Consulting

NYC & Denver – April 2019 — November 2020

- Supported Ruby on Rails and Node.js applications
- Automated infrastructure using Terraform, Ansible, and Jenkins
- Operated Docker and Kubernetes platforms

SRE / DevOps Engineer – Rackspace

Remote / San Antonio, TX – April 2018 — March 2019

- Worked under Google SRE model with equal focus on development and operations
- Administered OpenStack and AWS environments
- Automated operations using Python, Go, and Bash

SRE / DevOps Engineer – MapQuest / Verizon Location Services

Denver, CO – June 2017 — May 2018

- Provided DevOps support for navigation APIs and data platforms
- Built CI/CD pipelines using Jenkins, Terraform, Packer, and Chef

ADDITIONAL PROJECTS

- Developed Rust-based tooling for infrastructure automation and internal platforms
- Created developer tooling to standardize CI/CD workflows

EDUCATION

Bachelor of Science in Computer Science / Electrical Engineering
Stony Brook University (SUNY), Stony Brook, NY

TECHNOLOGIES

- DevSecOps: IAM policy reviews, Secrets Manager, Vault, AWS KMS
- Operating Systems: Linux (Debian, Ubuntu, RHEL, CentOS, Rocky, Alpine), BSD, Solaris
- Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis
- Tools: Git, GitHub, Nexus, Artifactory, Nginx
- Additional Skills: Daily use of AI-assisted development tools including ChatGPT, GitHub Copilot and Claude to accelerate infrastructure automation, scripting, testing and documentation.

ENVIRONMENT

AWS, Kubernetes, Terraform, Jenkins, Linux, Git, Vim

INTERESTS

Technology, social causes, hiking, camping, skiing, woodworking, home improvement

ADDITIONAL RESOURCES

- Terrorgrump Home Page (<https://www.terrorgrump.com/>)
- awk2me homepage (<https://www.awk2me.com>)
- pdf version of this page (<https://au79stein.github.io/unix-resume/resume.pdf>)

NOTES

- Created several document and documentation systems for end users. Some are simple in implementation yet present full content at a fraction of the cost and use fewer resources, resulting in additional cost savings.
- This page started out as an interesting effort to present resumes while allowing them to be updated with nothing more than a few basic tools - github, {gtn}roff, make, homebrew (optional).
- A result of this 'fancy' was a local computer based, resume management system that allowed recruiters to travel, and carry around a small subset of resumes (active candidates, if you will) that can be pulled up as simply as typing `man <candidate-name>` installed by a simple homebrew formula (`brew install <candidate-name>`) and removed by another (`brew uninstall <candidate-name>`)
